It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0

The WGS reads were placed uniquely on the MGSCv3 C57BL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

/call the last stomach; Vector: pT218RPI; Site 1: EcoRI;
Site 2: Not!; The pOly (A) + RMA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNM was ligated with DNA-RNA linker including EcoR is the by treatment of T4 RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was adjusted to alwa strand by Okayama-Berg method. The converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli TOploR' by electroporation method. The cDNA libraries constructed by this method are full-length enriched CDNA library."

1st strand cDNA was primed with a NotI-loigo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a

ligo-dr prime containing a Not I site. Double stranded

CDNA was ligated to an ECOR I adaptor, digested with Not

oligo-dr prime containing a library tag sequence that is

liret-strand CDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is

liret-strand cDNA contains a library tag sequence that is
